I cambi automatici sono sempre più popolari e sfruttando differenti tecnologie, negli anni sono stati migliorati permettendo di ottenere maggiore comfort e facilità di utilizzo. Possono essere a convertitore di coppia, con meccanismi robotizzati, a doppia frizione o a variazione continua del rapporto (CVT).
Nelle trasmissioni automatiche sono presenti numerosi attuatori idraulici e sistemi di pompaggio dell'olio che consentono di effettuare e gestire i cambi di marcia, l'olio assume un ruolo chiave nel funzionamento, non serve solo a lubrificare riducendo gli attriti, ma contribuisce direttamente alla trasmissione della potenza alle ruote.

A differenza del cambio manuale, l'olio è maggiormente stressato dalle temperature e alte pressioni che cambiano costantemente durante la guida. Infatti, per mantenere efficienti i sistemi idraulici ed evitare che i passaggi del lubrificante si possano ostruire con la formazione di morchie, nei cambi automatici sono presenti dei sistemi di filtri che servono a ripulire l'olio dalle impurità, le quali si formano con l'usura dei componenti metallici e dei pacchi frizione, se presenti. Senza la sostituzione dei filtri, l'olio nuovo verrebbe inquinato dopo breve tempo a causa delle impurità che sono state trattenute nel tempo dal filtro.

CARTUCCIA

CARATTERISTICHE:
Simili alle cartucce per l'olio motore, lavorano spesso assieme ai filtri a pannello per una maggiore filtrazione.

COPPA CON FILTRO INTEGRATO

CARATTERISTICHE:
Con il loro filtro integrato, consentono una manutenzione più veloce in quanto viene sostituita l'intera coppa olio.

FILTRO A PANNELLO

CARATTERISTICHE:
Filtri che si trovano internamente al cambio e che lavorano in abbinamento alle cartucce.

I punti di forza dei nostri filtri:

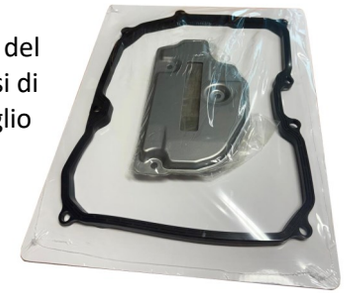
- *Prodotti in stabilimenti certificati secondo gli standard IATF16949, ISO9001, ISO14001, ISO45001;*
- *Prodotti con acciaio AISI 304 o lega al cromo-vanadio, stampati a freddo e con piegatura a CNC;*
- *Vibrosaldatura sui filtri con corpo in plastica;*
- *Media filtrante in cellulosa con il 20% di fibre di vetro; grammatura tra 190 e 300gr/m2 a seconda dell'applicazione;*
- *OR sempre inclusi, prodotti in gomma nitrilica NBR70 e NBR75;*
- *Guarnizioni a corredo in carta, gomma e gomma-metallo per garantire la massima tenuta.*

I nostri filtri sono disponibili in due pratiche tipologie di packaging:

SCATOLA

Per una miglior maneggevolezza del prodotto durante tutte le sue fasi di vendita e per proteggere al meglio le parti più sensibili.

BLISTER



La soluzione del blister consente di preservare al meglio le guarnizioni, pieghe e deformazioni potrebbero compromettere la corretta tenuta.

Tutte le nostre confezioni sono munite di una pratica etichetta a colori che riporta le principali informazioni e che aiuta a riconoscere velocemente il ricambio a scaffale. Inoltre, tutti i filtri sono sigillati all'interno di sacchetti di plastica per evitare contaminazioni esterne, nel caso di filtri metallici sono pre-oliati per preservare le caratteristiche del metallo nel tempo.

Automatic transmissions are becoming more and more popular and they use different technologies, they have been improved over the years, with greater comfort and easy to use. They can be with torque converters, with robotic mechanisms, dual clutch or continuously variable ratio (CVT).
Automatic transmissions have many hydraulic actuators and oil pumping systems that allow and manage gear changes, the oil have a key role, it not only used to lubricate by reducing friction, but is used directly for the transmission of power to the wheels.

Unlike manual transmissions, oil is more stressed by temperatures and high pressures that constantly change while we drive. To keep the hydraulic systems efficient and prevent the lubricant channels from becoming clogged with the formation of oil waste, automatic transmissions have filter systems used to clean the oil from impurities, which are created by the wear of the metal components and clutch packs, if present. Without replacing the filters, the new oil would become contaminated after a short time due to the oil waste that have been stopped by the filter over time.

OIL CARTRIDGE

FEATURES:
Similar to engine oil cartridges, they often work in pairs with panel filters for a better filtration.

OIL PAN WITH INTEGRATED FILTER

FEATURES:
With their integrated filter, they allow faster maintenance as the whole oil pan is replaced.

PANEL FILTER

FEATURES:
This filters are located inside the gearbox and works in pair with the cartridges.

Strengths of our filters:

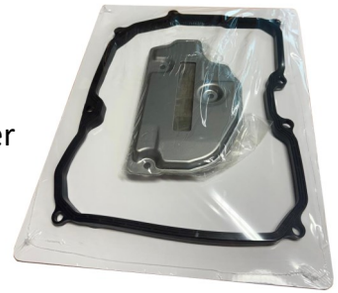
- *Produced in factories certified according to IATF 16949, ISO9001, ISO14001, ISO45001 standards;*
- *Made from AISI 304 steel or chrome-vanadium alloy, cold-stamped and CNC-bent;*
- *Vibro Welding on filters with plastic body;*
- *Cellulose filter media with 20% glass fibres; weight from 190 to 300gr/m2 based on the application;*
- *O'Rings always included, produced in nitrile rubber NBR70 and NBR75;*
- *Paper, rubber and rubber-metal gaskets supplied to ensure maximum sealing.*

Our filters are available in two types of packaging:

BOX

For better handling of the product during all sales phases and to protect better all the parts.

BLISTER



The blister solution allows to better preserve the gaskets, folds and deformations could compromise the sealing.

All our packages have a practical color label that shows the main information and helps to quickly recognize the spare parts on the shelf. In addition, all filters are closed inside plastic bags to avoid external contamination, for metal filters they are pre-oiled to preserve characteristics of the metal over time.
